# Tablet infotainment system

Bc. Michael Bláha

January 2016

Supervisor: Ing Jan Šedivý, CSc.

## / Declaration

Prohlašuji, že jsem předloženou práci vypracoval(a) samostatně a že jsem uvedl(a) veškeré použité informační zdroje v souladu s Metodickým pokynem o etické přípravě vysokoškolských závěrečných prací.

Beru na vědomí, že se na moji práci vztahují práva a povinnosti vyplývající ze zákona č. 121/2000 Sb., autorského zákona, ve znění pozdějších předpisů, zejména skutečnost, že České vysoké učení technické v Praze má právo na uzavření licenční smlouvy o užití této práce jako školního díla podle § 60 odst. 1 autorského zákona.

# Abstrakt / Abstract

Tento dokument je pouze pro potřeby testování.

# Chapter 1 Introduction

https://docs.google.com/document/d/1pGtlS5uY4PdKfHjf83dFGrajyVcea0tvzAnwXf61Cs8/edit

 $generally\ progress:\ \verb|https://docs.google.com/document/d/1CEWym7MphsCOOv3CXe_bTHOgFBgquBbPVbedit$ 

## 1.1 Project

See above

#### 1.1.1 Motivation

See above

## 1.2 Assignment analysis

#### ■ 1.2.1 Review existing Android applications for in-car use

One of the key approches in research project is reviewing the existing progress in the given field. Reviewing existing applications helps understanding the topic, seeing the bigger picture, learning from mistakes of others and last but not least, getting general idea about competition.

# **1.2.2** Review and analyse User Interface development methods for in-car infotainment applications

Cosindering the car environment, the user interface must deal with a lot of different problems than usual. This task should review existing User Interface development rules and apply them to the car environment, then analyse them and choose proper method for car-UI design process.

### ■ 1.2.3 Analyze the in-car OBD API and exported data

On-Board Diagnostics API is a standard API provided by modern cars for gathering various information from speed to engine temperature. This task focuses on understanding and gathering data from the OBD API.

# 1.2.4 Design an application system architecture for accessing the OBD data and resources

Having the data from OBD and preparing an application for displaying them, designing proper architecture is required for everything to work well. The application has to gather data, while displaying them properly without unnecessary (FIX!) delay.

#### ■ 1.2.5 Design a tablet User Interface for in-car use

After reviewing existing applications and UI development methods, the next goal is to create new User Interface for in-car use, while considering the constraints this environment puts on it.

#### 1.2.6 Design and implement in-car application offering the OBD data for Android tablet platform

With everything prepared and thought through, the application will be developed based on result from all the tasks accomplished so far. In this case, the Android platform will be used as explained later in the text.

#### ■ 1.2.7 Perform UI and application testing and evaluate results

For best results the application must and will be tested. Both code and UI must be tested properly, using various testing approaches, such as unit tests or UI testing with reaul users in a car simulator.

# Chapter 2 Analysis

see application analysis https://docs.google.com/document/d/1QyOiMzVOikcDhPY3P5MsRL\_80cCGULO/edit priority list https://docs.google.com/document/d/1juKYgUUDSI5CmfzjR4BsYSPHVYCGqrWuegedit

## 2.1 Existing applications

#### **2.1.1** Applications

see https://docs.google.com/document/d/1p\_pSGTUHEojOyP7ICCDNVV7RW1vn8iN\_KECipC4Y9tY/edit http://www.makeuseof.com/tag/5-best-dashboard-car-mode-apps-android-compared/

#### **2.1.2** Torque

Starting with an empty screen, lot of settings are required before using this application, since there is no default mode. Adding new views is easy and intuitive, but still very confusing. The add menu lacks hierarchy and everything is just sorted array of various options. There is no cancel button when popping the menu dialog.

This application can actually show almost anything OBD provides. It supports differents types of display, but it is hard to tell by their names. Responsiveness it not smooth at all and launching the application in horizontal mode confuses it, everything behaves like if it was in vertical mode.

#### 2.1.2.1 Advantages

- Lot of data from OBD available,
- various layout settings and themes,
- HUD mode.

#### 2.1.2.2 Disadvantages

- One-level confusing menu without hierarchy,
- limited size options for displays (3 types),
- lacks default mode with predefined displays,
- hard to place displays, the grid does not work well,
- slow and laggy.

#### 2.1.3 CarHome Ultra

This application starts with a pop-up tutorial for it's elementary functionality, telling the user about the speedmeter, compass, weather forecast and customizable dashboard for launching external applications. In default it offers Google Maps, Google Navigation and voice search. Adding another external application shortcut is done by tapping the 2. Analysis

tab. Also there are basic settings, which offer brightness mode (day, night, auto), theme and safety options.

It appears to be just a simple application offering speed, compass, weather and external application launcher. The new version also displays location (address) and a phone version is able to respond to text messages. It also supports text to speech (on touch).

#### 2.1.3.1 Advantages

- Simple UI, easy to understand,
- responsive, fluent,
- possible to change units (mile/km, etc.),
- lot of themes available,
- adjustable update rates,
- a lot of different settings.

#### 2.1.3.2 Disadvantages

- Small buttons on small screens (fixed 6 buttons),
- even smaller setting buttons
- limited functionality
- tapping weather makes the app speak for every single tap, no matter if it already speaks (it can speak for hours after few taps).

#### 2.1.4 Car Dashdroid

- 2.1.5 Ultimate Car Dock
- 2.1.6 Google AutoUI

### 2.2 Platforms

Possibilities: Android, iOS, WP(?) State requirements, properties, criteria

- 2.3 Android platform
- 2.3.1 Architecture
- 2.3.2 Specifics
- 2.4 **GUI**

#### **2.4.1** Basic principles

MI-NUR

#### 2.4.1.1 Consistence

Dont make user learn things twice

#### 2.4.1.2 Simplicity of usage

KIS principle

#### **2.4.1.3** Shortness of learning curve

Easy to learn, critical environment

#### 2.4.2 Car UI differences

What else to consider?

#### 2.4.2.1 **Controls**

Sizes, big enough to touch

#### 2.4.2.2 Visibility

Sizes, fonts big enough to see, data

#### 2.4.2.3 Contrast

Colors, visibility at night/day

#### 2.4.2.4 Responsivness

Responsive, must see whats going an as fast as possible

- 2.5 Server
- **2.5.1** Functionality
- **2.5.2** Data storage
- 2.5.3 Communication
- 2.6 Development and support tools
- 2.6.1 Development environment
- **2.6.2** Quality Assurance tools
- **2.6.3** Version system
- 2.6.4 Test driven development
- **2.6.5** Continuous integration

# Chapter 3 Design

- 3.1 Application architecture
- 3.1.1 Extensibility
- **3.1.2** Modularity
- 3.1.3 Adaptability
- 3.1.4 AutoUI preparation
- **3.1.5 Platform limitations**
- 3.2 **GUI**
- 3.2.1 Basic elements

Basic idea

3.2.2 UI drafts

Describe the process, phases, analyse and compare advantages, disadvantages, thoughts

# Chapter 4 Realization

- 4.1 Preparation
- 4.1.1 Environment
- 4.1.2 Versioning
- **4.1.3** Testing
- 4.1.4 Scripting
- 4.2 Core
- 4.2.1 Core
- 4.2.2 Data storage
- 4.2.3 Communication
- 4.2.4 Optimization
- 4.3 Modularity
- 4.3.1 Requirements
- 4.3.2 Integration
- 4.4 **GUI**

GUI implementation based on the design! Implementing modules, color, responsive effects

#### 4.4.1 Common elements

Hierarchical model, effects, submenus

#### 4.4.2 Multiple designs

Limited set of module types

# Chapter **5**Testing

Brag about TDD, CI and Simulator!

### 5.1 Code

Describe testing code, common testing (look&see, etc.)

#### 5.1.1 Unit testing

Unit testing on android, mention Test driven development, continuous integration, automatic tests, consider giving an example

#### **5.1.2** Integration testing

Instrumentation? Describe TDD, CI, automation

#### 5.1.3 System testing

Server testing, consider removing

#### **5.1.4** Qualification testing

Testing with users - consider section on its own - testing application as a whole thing

### 5.2 **GUI**

### 5.2.1 Heuristic testing

Introduction, description

#### **5.2.1.1** Evaluation

https://docs.google.com/document/d/1LAPqmYqe5LBE6vqWpi-rRYjHY1-zVPCzkFP2Gvh5i-Q/edit

#### 5.2.1.2 Conclusion

Did not have time to fix

### **5.2.2** Testing with users

#### 5.2.2.1 Usability testing

Testing the application as a regular application. Is it understandable? Is it easy to control, to see data, to understand, to comprehend, to learn?

#### 5.2.2.2 Simulator

Describe the car simulator in Albertov. DO NOT FORGET TO THANK THE DEPARTMENT OF DRIVING SMTHING, CVUT FD

#### 5.2.2.3 Preparations

Selecting the world models and preparing them for testing, installing EyeTracker cameras, installing WebCamera, preparing data gathering, designing scenarios

#### 5.2.2.4 Course

The testing itself, describing participants

#### **5.2.2.5 Evaluation**

Evaluating results

## 5.3 Summary

# Chapter 6 Conclusion

- 6.1 Assignment completion
- 6.2 Project life cycle
- 6.2.1 Present
- **6.2.2** Future
- 6.3 Summary
